Regular departures every 40 minutes on the Puttgarden-Rødby route – paving the way for a greener future

Dear Freight Customer,

Over the next six months, our ferries on the Puttgarden–Rødby route will depart **every 40 minutes** instead of every 30 minutes.

This is because two of our ferries are heading into longer shipyard stays – but for the best of reasons: they are being upgraded to modern **plug-in hybrid ferries**, which will reduce CO₂e emissions by up to 80 percent.

It's a big step towards our goal of running the route completely free of direct emissions by 2030.

To help keep things running smoothly during this period, our dedicated **freight ferry Kronprins Frederik** will be supporting operations from Monday to Saturday.

And there's even more good news:

Later this year, we will **welcome our very first zero direct emissions ferry** on the Puttgarden–Rødby route. Not only will this new ship operate completely emission-free during the 45-minute crossing, it will also **boost capacity significantly** as she is designed to carry lorries on **both decks**.

That means more space, greater flexibility, and even better service for our freight customers – including improved options for transporting dangerous goods safely and efficiently.

So, while departures on Puttgarden–Rødby will be a little less frequent for a while, the result will be an even **greener, more spacious, and future-ready ferry service**.

We thank you for your understanding and look forward to welcoming you on board!

With best regards
